

AVIS Portal (2006)

ADVANCED VETERINARY INFORMATION SYSTEM

AVIS Portal - 2006 Fact Sheet

Authors and General Editors

- Dr. William A. Geering - AVIS Scientific General Editor, Canberra, Australia
- Dr. Anthony J. Garland - AVIS College Consultant, Pirbright, UK
- Dr. Mark M. Rweyemamu - AVIS College Technical Director, London, UK

Commissioning Editor

- Professor Julian Hilton - Chairman, AVIS College, AleffGroup, London, UK

AVIS: The Advanced Veterinary Information System Portal

The AVIS System was initiated in 1992 to pioneer the creation of peer-reviewed, “gold-standard” multimedia reference and training materials for professionals, stakeholders and decision-makers in animal health and production. Programs are reviewed and updated on an ongoing basis. 2004 saw the publication of the most comprehensive revision to date. From 2005, AVIS programs are available to subscribers on-line, through the AVIS Portal, as well as on CD or DVD. With the introduction of the on-line edition comes a commitment to continuous update, on approximately a quarterly basis. The goal is to bring the expert, and the expertise, to the point of need.

The Expert at the Point of Need

AVIS Edition 2006

AVIS is pleased to announce that the revised and updated 2004 edition has been updated in 2005 and again in January 2006. The 2006 edition takes into account extensive feedback from professional users in the field and the training settings, as

well as opening up new approaches to risk analysis and risk management for the veterinary public service professional and for other stakeholders.

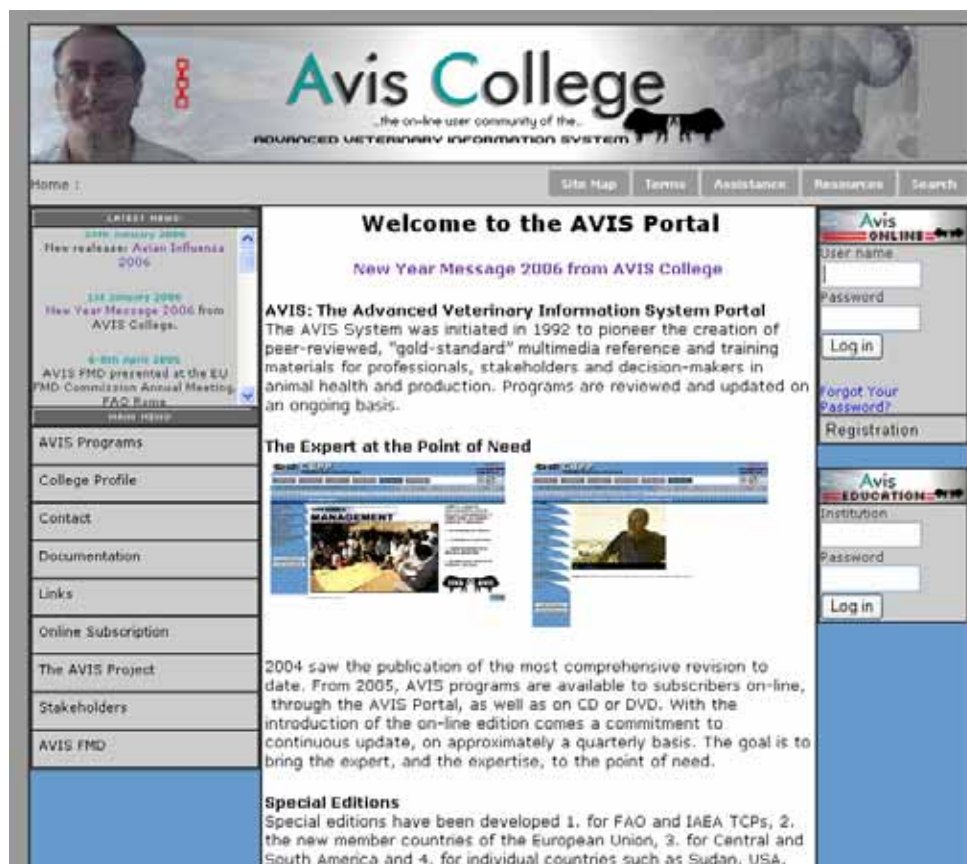

While all programs in the series have undergone subtle changes, major changes are to be found in the Avian Influenza and FMD programs which incorporate the dynamic changes in knowledge that has been accumulated during 2005.

Millions of users world-wide have shown that AVIS programs are well suited to public information and communication. FMD alone attracted 11 million online users when it was made available at www.aleffgroup.com at no charge during the 2001 outbreaks.

AVIS College: www.aviscollege.com

President: Dr. Apostolos Rantsios **General Editor:** Dr. William Geering
Technical Director: Dr. Mark Rweyemamu

AVIS programs are written by leading experts from all over the world, led from the AVIS College in London. Initiated in 1992, the College brings together an experienced team of leading experts and practitioners as an oversight body for AVIS activities and publications. All AVIS programs are now kept under rolling review, and on-line versions are updated regularly. Programs are also subjected to independent peer-review, and to field testing and user evaluations. All programs provide access to authoritative reference information, such as FAO Manuals and the expertise of the designated World Reference Laboratory.

AVIS Founders

AVIS Founders were:

BBSRC Institute for Animal Health, Compton and Pirbright, UK
 The Food and Agriculture Organisation, Rome, Italy
 L'Office International des Epizooties, Paris, France
 Telos ALEFF Ltd., London, UK.

AVIS is now evolving as a free-standing entity, through the mechanism of the AVIS College.

AVIS: High Impact Diseases

The primary AVIS targets are High Impact diseases, such as FMD and Avian Influenza, Rabies and Brucellosis. A full list is found below. Every high-impact disease is reviewed in an *Overview* module. Depending on the significance and complexity of that disease there are up to five further modules, each meeting the needs of a different stakeholder. A *Resources* module, containing maps, images, key documents, tools, checklists and useful links to other web-based resources enriches the whole program.

...preventing and controlling High Impact Diseases...

OIE FAO IAH AleffGroup

Welcome to the AVIS January 2006 edition. This is an update on the 2004-5 AVIS suite and contains a number of subtle changes. The most extensive changes are in the FMD and avian influenza programs.

[About AVIS](#)
[About Aleff Group](#)
[About AFSIS](#)

In the light of the decision by the OIE to depart from its previous classification of diseases according to List A and List B, the AVIS editors have termed the group of diseases addressed in the AVIS series as "High Impact Diseases". This has been maintained in the January 2006 edition. The phrase reflects the evolving realisation of the impact of animal diseases as having multi-sector effects, including disease, suffering and death of animals; disease or death in humans; the safety of food, trade restrictions, adverse effects on rural livelihoods and rural based industries as well as detrimental environmental effects. There is

Each module is also richly illustrated with maps, colour photographs, diagrams and videos, while a wide variety of *Tools*, such as checklists and animations of key processes, support key work processes. These make the programs highly suited to real time professional use, as well as training. Powerful navigation aids and a search engine make the AVIS knowledge base easy to access.

Reference and Training User Testing

AVIS programs have been successfully tested in the field during 2005 in a wide range of countries and settings, from Scotland to Tanzania. Overall satisfaction ratings average 4.2 (out of five) with the great majority of testers rating programs “essential” (5) or “very useful” (4).

SPECIAL EDITIONS

Special editions have been developed for 1. FAO and IAEA TCPs, 2. the new member countries of the European Union, 3. Central and South America and 4. individual countries such as Sudan, USA, Israel, Thailand and Poland. Such editions include national or regional documentation and direct access, in local languages to locally produced content. This content is co-reviewed with the AVIS Editors before inclusion.

Special Price for Program Evaluation

For veterinary services interested to evaluate programs at a field level, AVIS can offer a trial period at a special price. Evaluation can take place either on-line or on CD, or a combination of the two. This has proved to be a very popular means of ensuring everyone has the opportunity to trial these programs before they are rolled out to a wider audience. Details on request.

Training

AVIS programs are already being widely used for training purposes; however, the adaptation process to a more formal training methodology is under way. We welcome enquiries for this particular type of use. We also seek collaboration with organisations who would be willing to work with us to assist in the instructional design and testing process.

AVIS: Addressing Stakeholder Needs

Different stakeholders in animal health and production have different needs, but common standards link all actions and interventions. The *Overview* module gives the non-specialist a rapid and authoritative introduction to the key issues concerning a given disease. Further modules address specific stakeholder needs:

- Livestock producers and farming communities
- Planners and decision-makers on the national and sub-national level
- National veterinary authorities and reference sites
- Regional field staff and extension services, including veterinarians
- Laboratory workers
- Epidemiologists and control specialists
- Personnel from enterprises and organizations involved in animal disease control, i.e. meat and dairy industry, vaccine producers, NGOs
- Veterinary students.

Languages

AVIS is now working, where there is identified need, in English, Spanish and French. Rabies, for example, is available in English and Spanish. Other languages, such as Arabic are under active discussion. If you have a specific language requirement, please contact the AVIS office in London.

The Power and Ease of Multimedia

Multimedia technology puts users at the centre of an authoritative information web. Colour photographs, hotwords or hyperlinks, animations and maps make the knowledge-base easy to comprehend and navigate for the trainee or non-specialist.

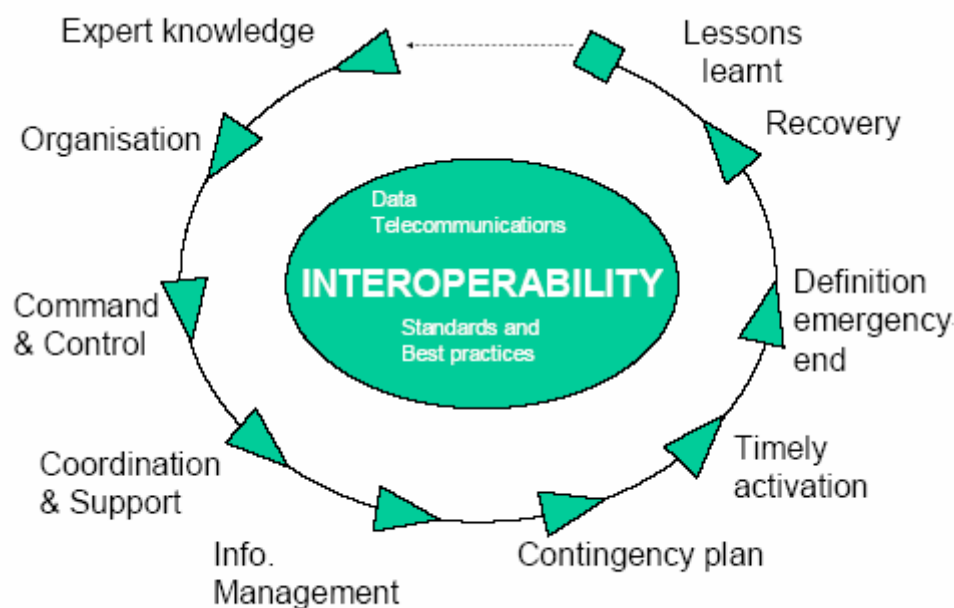

Customisation

AVIS can customize programs for particular needs, such as local legal requirements, language, culture, or regional priorities. Discuss your needs with an AVIS officer – contact details below.

Promoting Interoperability

Promoting interoperability is a key objective for AVIS, both through effective knowledge management and through the increasing integration of live data and other essential management tools (such as direct access to contingency plans) into AVIS programs. In schematic for the objective may be represented as follows:

AVIS: Interoperability in Practice

AVIS Associations and Collaborations

AVIS welcomes collaboration and association with complementary projects. Examples to date include:

AFSIS: (Advanced Food Safety Information System) General Editor, Dr. Apostolos Rantsios. For further information, visit www.afsis.com.

FAO EMPRES: Good Emergency Management Practice (GEMP)
The objectives of AVIS are also coordinated with the FAO EMPRES action.
Planning: In order to prepare well for a possible animal disease outbreak, good planning is essential, to a high level of precision and detail.

Molecular Diagnostic Techniques: A companion series of programs is also being developed on diagnostic techniques derived from molecular biology. The first program, the *Overview*, was released in October 1999. A web-enabled version is also now available.

Support and Contacts

Technical Support

For technical support, please contact Dr. Mark Rweyemamu, AVIS Technical Director, at the AVIS Office, or by email AVISCollege1@aol.com.

AVIS Pricing Policy and Discounts

Equity Pricing

AVIS has an "Equity Pricing" policy, based on capacity to pay. Substantial discounts are available to developing countries and educational establishments. Discounts may be combined. Programs may be purchased through subscription or a licence payment. Revenues from published programs are used to fund the development of new ones. The purchase of AVIS has been supported by a wide number of governmental, non-governmental and commercial organizations. These are gratefully acknowledged.
